

# COMPOSTING PROGRAMS

## FOR EARTH WEEK AND BEYOND

### Improve Waste Diversion from Landfill

1 Waste Reduction 2 Reuse 3 Recycling

The 3 R's are all ways to contribute to a higher waste diversion rate, conserve landfill space and reduce greenhouse gas emissions.

### Food Scraps Have Purpose Too

Back of house food scraps from preparation to expiration can be collected in a compost program. Instead of emitting harmful methane gas in a landfill, composted food waste can add value to farming and other agricultural practices.

### A Circular Vision

It starts with **YOU**.

Whether a participant or a champion of an organic waste diversion program, every step counts. Re-think the power of food waste!

Thank you!
