EARTH DAY 2026 ISN'T ABOUT AWARENESS. IT'S ABOUT ACTION.

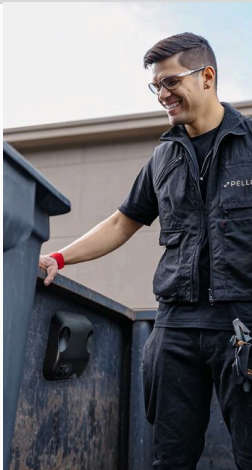

In the face of escalating environmental challenges, this Earth Day's theme, **Our Power, Our Planet**, is a call to move beyond intention and into execution. It recognizes a simple truth: environmental progress doesn't come from one policy, one company, or one moment. It's driven by consistent, collective action across industries, communities, and systems.

Sustainability as a System

Every ton diverted, every route optimized, every material recovered is a measurable step toward a more sustainable future. But impact at scale requires more than good intentions. It requires infrastructure, data, and execution. RTS was built to do the work.

Make waste visibility actionable

We give companies real-time insight into their waste streams—what's being generated, where it's going, and how to reduce it.

Drive diversion, not just disposal

From recycling to composting to reuse programs, we help businesses move material out of landfills and back into circulation.

Optimize operations to cut emissions

Smarter routing, right-sized service, and vendor accountability reduce unnecessary pickups, fuel usage, and cost.

Accountability to the entire ecosystem

Through our network of haulers and partners, we ensure sustainability goals are both executed and reported.

Built for Our Planet

At RTS, our power is building a cleaner, more efficient, and more accountable waste system. One customer, one hauler, one pickup at a time. Sustainability isn't a side initiative. It's our core infrastructure.

If you're ready to turn environmental goals into measurable impact, RTS is ready to partner. **Together, we can turn our power into progress for our planet.**
